Homocystinuria

March 2023

MarketVue®: Homocystinuria

UNDERSTAND THE HOMOCYSTINURIA MARKET

MarketVue market landscape reports combine primary (KOL interviews) and secondary market research to empower strategic decision-making and provide a complete view of the market.

Every **MarketVue** includes a disease overview, epidemiology (US and EU5), current treatment, unmet needs, pipeline and access and reimbursement chapter.

Methodology: Research is supported by 8 qualitative interviews with key opinion leaders (U.S. Medical Geneticists) and secondary research.

Geographies covered: United States plus epidemiology for EU5 (France, Germany, Italy, Spain, United Kingdom).

TOPICS COVERED

EPIDEMIOLOGY: Understand prevalence, diagnosed and drug-treated prevalence of the population and key market segments

CURRENT TREATMENT: Understand the treatment decision tree and strengths and weaknesses of current on-label and off-label treatment

UNMET NEEDS: Identify opportunities to address treatment or disease management gaps

PIPELINE ANALYSIS: Compare current and emerging therapy clinical development strategy; their performance on efficacy, safety, and delivery metrics; and their potential to address unmet needs

VALUE AND ACCESS: Review the evidence needed to assess and communicate value to key stakeholders (e.g., providers, payers, regulators) and learn what competitors have done or are doing

Why MarketVue?

- **PMR-Driven** – Insights informed by qualitative interviews and/or quantitative surveys
- **Senior Team** – Experienced team members (10+ years in pharma market research) lead the research
- **Strategic** – Delivered in a concise and strategic report template vetted by pharmaceutical industry professionals
- **Fresh** – New reports or report refreshes delivered in as little as 15 business days

MarketVue®: Homocystinuria

UNDERSTAND THE HOMOCYSTINURIA MARKET

COMPANIES MENTIONED

- Travers Therapeutics
- Aeglea BioTherapeutics
- Synlogic
- Codexis

DRUGS MENTIONED

- Betaine (Cystadane)
- Folate
- Pegtibatinate / TVT-058
- Pegtarviliase / AGL-177
- SYN1353
- CDX-6512
- AAV1-CMV-hCBS
- Cystathionine
- Taurine

MarketVue®: Homocystinuria

Table of Contents

1. DISEASE OVERVIEW	5 - 6
A rare, autosomal recessive disease resulting from enzyme deficiency and causing severe symptoms	5
Figure 1.1. Homocystinuria metabolic pathway implications for current and future treatments	5
HCU symptoms and complications	6
Figure 1.2. HCU symptoms and complications	6
HCU mode of inheritance	6
2. EPIDEMIOLOGY & PATIENT POPULATIONS	7
Disease definition	7
Figure 2.1. Diagnosed prevalent cases of CBS deficient HCU patients by region	7
Table 2.1. Diagnosed prevalent and drug-treated populations of HCU in the U.S. and EU5	7
3. DIAGNOSIS & CURRENT TREATMENT	8 - 16
Diagnosis overview	8
Figure 3.1. Diagnostic pathway for homocystinuria patients	8
Delayed diagnosis of homocystinuria is largely due to inadequate newborn screening	9
Figure 3.2. Drivers of delayed diagnosis in homocystinuria patients	9
Figure 3.3. The four P's for improved homocystinuria diagnosis	9
Biochemical testing is standard for confirming a diagnosis, while molecular testing is largely dependent on insurance coverage	10
Figure 3.4. Genetic testing use in homocystinuria patients	10
Figure 3.5. Segmentation of HCU population by response to pyridoxine treatment	10
Treatment of homocystinuria is standard, with few therapeutic options	11
Figure 3.6. Treatment goals for homocystinuria	11
Figure 3.7. Interviewed U.S. geneticist homocysteine level goals	11
Treatment algorithm	12
Figure 3.8. Treatment algorithm for the management of homocystinuria	12
Medical geneticists' insight on current homocystinuria treatment approaches	13
Upsides and downsides of betaine	14

Table of Contents

Figure 3.9. Upside and downside of betaine treatment	14
Key treatment dynamics that will shape disease management and drug use in homocystinuria	15
Table 3.1. Must-know homocystinuria market dynamics	15
Figure 3.10. Medical geneticist-reported average % of homocystinuria patients not satisfied with current treatments	15
There is a large opportunity for a therapy that will reduce strict dietary modification	16
Figure 3.11. Important dynamics of homocystinuria market evolution	16
4. UNMET NEED	17
Overview	17
Figure 4.1. Physician-reported unmet needs in homocystinuria patients	17
5. PIPELINE ANALYSIS	18 - 20
Overview	18
Table 5.1. Emerging HCU therapies	18
Efficacy and safety will be important drivers of future product differentiation in homocystinuria	19
Figure 5.1. Attributes that will drive uptake for emerging HCU therapies	19
Geneticist insights on clinical-stage products in development	20
6. VALUE & ACCESS	21 - 23
Insurance coverage of HCU patients	21
Table 6.1. Current pricing of HCU treatments	21
Overview of Drug Analogues	21
Table 6.2. Current PKU therapy pricing, U.S.	21
Commercial payer requirement of drug analogues	22
Table 6.3. Summary of commercial insurance requirements for Kuvan and Palynziq	22
BioMarin patient access strategies for Kuvan and Palynziq	23
Figure 6.1. BioMarin market access strategies to promote access to Kuvan and Palynziq in the United States	23
7. METHODOLOGY	24 - 25
Primary Market Research Approach	24
Epidemiology methodology	24

Meet the REACH Team

DANIELLE DRAYTON, PhD., Dr. Drayton is CEO and Founder of REACH Market Research. She is a seasoned business leader and pharmaceutical market researcher. Prior to founding REACH, Dr. Drayton led the Biopharma Market Assessment business at Decision Resources Group (DRG) comprised of market research, RWD analytics, and consulting business lines. In her 14 years at DRG, she worked with 48 of the top 50 pharmaceutical companies and countless biotech companies that involved exhaustive evaluation of unmet need, target product profiles, commercial potential and new product adoption, and company competitiveness. She also has extensive experience conducting product and market opportunity assessments, portfolio analysis, product and therapeutic area strategy, product valuation and sales forecasting, and pre-launch planning. Dr. Drayton completed a postdoctoral fellowship at the Harvard Medical School, received a Ph.D. in Immunobiology from Yale University, and earned a B.S. in Microbiology and Immunology from the University of Miami (Florida).

MELISSA CURRAN is the Director of Product Management at REACH. Melissa has over 10 years of life sciences market research and consulting experience spanning from bespoke strategy consulting to syndicated market research product development and management. Prior to joining REACH, she worked at Decision Resources Group (DRG) for 7 years assisting pharmaceutical and biotechnology commercial teams across the product lifecycle to inform strategic decision making. Melissa is particularly passionate about new product planning and portfolio management, especially in the rare disease space where data can be scarce, and decision-making can be challenging. Specific types of strategic assessments Melissa specializes in include market landscape assessments, commercial opportunity assessment, patient journey mapping, product positioning and TPP optimization, portfolio prioritization, and competitive intelligence. She also has extensive experience working across various market research methodologies including qualitative interviews, quantitative surveys, patient chart audits, real world claims and EHR data, conjoint analysis and secondary research. Melissa received her bachelor's degree in Biology and minor in Business from Providence College.

MICHAEL HUGHES, MSc, Ph.D., Dr. Hughes is the Director of Research at REACH. He has worked in academia, regulatory affairs (NICE) and in RWE and epidemiology consultancies, leading the global epidemiology team at Clarivate (previously Decision Resources Group) for many years. Over that period, he has built numerous new approaches to epidemiological forecasting and imputation, which now form industry best-practice. He has built syndicated and custom epidemiological models and forecasts for many blockbuster drugs across many therapeutic areas, often using a hybrid approach sourcing data from multiple types of dataset and primary market research. He has recently worked on projects in prostate cancer, amyloidosis, anaphylaxis and multi-drug resistant UTIs, among others. He has supported the needs of both big pharma, including Novartis, GSK and Johnson and Johnson, as well as smaller companies and biotechs.

Meet the REACH Team

TYLER JAKAB, MPH is an analyst at REACH Market Research. He is responsible for conducting both primary and secondary market research regarding rare disease therapies to be integrated into market research reports for life science clients. Tyler is a recent graduate of Boston University School of Public Health where he obtained an MPH in Epidemiology of Biostatistics. Prior to joining REACH, he held roles in which he was responsible for health policy analysis, tobacco control research, and health communication. He has extensive experience in data analysis, as well as manuscript and report writing. Tyler also earned a BS in Psychology and Anthropology from the University of North Carolina at Chapel Hill.

BAYLEY KOOPMAN is a Research Associate at REACH Market Research. At REACH, Bayley supports both primary and secondary market research through literature reviews and working with qualitative data. He recently graduated from Tufts University with a B.S. in Biology where he studied the interdisciplinary OneHealth approach for public health and the environment. During this time, Bayley founded an early-stage consumer product startup, which became a finalist team in two consecutive Tufts University Entrepreneurship Pitch Competitions. Prior to joining REACH, Bayley also held roles in regulatory affairs in the rare-disease pharmaceutical industry and veterinary practice.

BRIANA MULLINS is a current PhD student At NYU School of Medicine studying the immunological progression of disease in psoriatic arthritis. She currently does both laboratory research and computational biology. Previously she earned her undergraduate degree in Biochemistry at New York University (NYU) and worked in the Blaser Lab studying the human microbiome. She also received an MSc. in Population Health at the University College London (UCL) and conducted antibiotic prescription research using the UK THIN Database. Before starting her PhD Briana worked at Decision Resources Group as an Associate Epidemiologist.
